**CAUTION:** When beds are not being manually raised or lowered, the BRAKE MUST BE SET or beds will drift down and will damage objects or vehicles placed below the beds.

**CRANKING POINT FOR MANUAL OPERATION**

Use ½” hex socket wrench. Cranking is easier if 2 people crank, one on each side of the coach.

**EMERGENCY MANUAL OPERATION**

Note: Before manually cranking the bed-lift, the brake must be released and the motor unplugged.

**To Manually Raise the beds:**
1. Unplug the motor
2. Release the brake
3. Turn hex shaft using a ½” ratchet wrench.
4. Re-apply brake at desired bed height.
5. Reconnect motor plug.

**To Manually Lower the beds:**
1. Unplug the motor
2. Release the brake
3. Apply downward pressure to the bed platform.
   Bed will slowly drift downward.
4. Re-apply brake at desired bed height.
5. Reconnect motor plug.
