Leads from Motor
Red to M2
Black to M1

WIRE SIZES
Wires to all switches need be no larger than 18 gauge. Wires to +12 V and ground must be 10 gauge multi-strand. Wires to motor must be at least 12 gauge.

MICRO-SWITCH WIRING
One of the wires from each micro-switch shares a terminal with the corresponding wire from the UP-DOWN switch. There is no polarity to the micro-switches.

WIRING HINTS
Keep wire runs as short as possible & minimize number of connections for maximum current flow and best performance.

Color-coding or wire marking when wires are drawn will make final hook-up easier & quicker.
